Release 0.1.0

constrict0r

Oct 06, 2019

Contents

1	Ingredients	3
2	Installation	5
2.1	Requirements	5
3	Usage	7
4	Options	9
5	Compatibility	11
6	License	13
7	API	15
8	Authors	17

Create customizable python projects from a simple package directory layout to a web application.

Documentation on [read the docs](#).

CHAPTER 1

Ingredients

reSt

resources/img/travis.png

CHAPTER 2

Installation

```
pip install amanita
```

2.1 Requirements

- `pypoetry`.
- `direnv`: optional, Linux or MacOS only.
- `git`: optional.
- `sphinx`: optional.

CHAPTER 3

Usage

To create a simple package directory:

```
amanita my_project
```

To create a package with a virtual environment:

```
amanita my_project -v
```

To create a package with development profile:

```
amanita my_project --dev
```

A development profile includes:

- A package directory layout.
- A virtual environment.
- [Direnv](#) configuration.
- [Tox](#) configuration.
- [Travis CI](#) configuration.
- [Sphinx doc](#) configuration.
- [A git](#) repository.

To create a web application with [flask](#) from an [openapi](#) specification:

```
amanita my_project -a /home/user/api.yml
```

CHAPTER 4

Options

This package offers multiple options to customize the project creation process:

- V, --version** Show the version and exit.
- d, --direnv** Configure `direnv` console enviroment switcher.
- e, --venv-path TEXT** Create and configure a virtual enviroment on the given path.
- t, --travis** Create `travis ci` configuration.
- v, --venv** Create and configure a virtual enviroment inside the project.
- venv-only** Only create a virtual enviroment on PATH.
- x, --tox** Add `tox` configuration.
- h, --help** Show help and exit.

CHAPTER 5

Compatibility

Python 3.

CHAPTER 6

License

MIT. See the LICENSE file for more details.

CHAPTER 7

API
